

```
EnableLinOp< llu< solver  
::LowerTrs<>, gko::detail  
::transposed_type<solver  
::LowerTrs<>>, false, int32 > >
```

```
gko::Transposable
```

```
gko::preconditioner  
::llu< LSolverTypeOrValueType,  
USolverTypeOrValueType, ReverseApply,  
IndexType >
```

```
graph LR; A["gko::preconditioner::llu< LSolverTypeOrValueType, USolverTypeOrValueType, ReverseApply, IndexType >"] --> B["EnableLinOp< llu< solver::LowerTrs<>, gko::detail::transposed_type<solver::LowerTrs<>>, false, int32 > >"]; A --> C["gko::Transposable"];
```

The diagram illustrates the dependencies of the `gko::preconditioner::llu` template. It is shown in a grey box on the right. Two blue arrows point from this box to other components on the left: one to the `EnableLinOp` template (in a white box) and another to the `gko::Transposable` class (in a white box).
